UNIT 3 · EVIDENCES 3

Checklist · Evidence 3 (coevaluation)

Evaluated team: Betsy Durán, Emanuel de la Cerda, Omar Rodríguez, Karen Terrazas, Zaid Legarda
Evaluating team: Samuel Moo Limon, Bryan Loera, Damian Olivas, Elías Hernandez, Raymundo Herrera

#	Indicator	Points	Yes	No
1	The repository link opens and the README explains how to install and run the microservice	8	☑	☐
2	The service starts following only the README instructions	10	☑	☐
3	It exposes at least three endpoints with correct HTTP verbs and resource-style URLs	10	☑	☐
4	Responses use correct status codes (200/201/204 on success; 400/401/404/409 on errors)	8	☑	☐
5	Input is validated: invalid data returns 400 with a clear JSON error	8	☑	☐
6	At least one endpoint is protected; requests without valid credentials are rejected	10	☑	☐
7	Secrets are in environment variables; .env is not in the repository; .env.example exists	8	☑	☐
8	Errors never show stack traces or internal details to the client	6	☑	☐
9	The microservice consumes at least one third-party API from the backend, with error handling	10	☑	☐
10	The main application consumes the microservice in one module (shown in the demo or code)	10	☑	☐
11	Tests or a request collection prove each endpoint works	6	☑	☐
12	Commit history shows contributions from every team member	6	☑	☐
	Total	**100**	**100**	

Contribution to the unit = (points ÷ 100) × 30%. **30%**

Comments for the evaluated team (one strength, one improvement):

•Strength: The team did a great job with their project. Everything was well organized, the endpoints worked correctly, and they explained how the system works clearly.

•Improvement: They could make the README a little easier to follow and include more examples to help someone who is using the project for the first time.
